

Инструкция по установке связи с GitHub

1. Нужно залогиниться с сервера на Гитхабе

Sign in to GitHub

Username or email address

Password [Forgot password?](#)

[Sign in](#)

[Sign in with a passkey](#)

New to GitHub? [Create an account](#)

2. Создаем новый репозиторий если это требуется, добавляем файл README

Create a new repository

A repository contains all project files, including the revision history. Already have a project repository elsewhere? [Import a repository.](#)

Required fields are marked with an asterisk (*).

Owner * Repository name *

 kaskad-saim / carbon-server

✓ carbon-server is available.

Great repository names are short and memorable. Need inspiration? How about [super-succotash](#) ?

Description (optional)

3. Создаем файл .gitignore в проекте, для того чтобы отметить файлы, которые загружать не нужно

```
.gitignore X
kaskad > .gitignore
1 /graphics/
2 /reports/
```

4. Открываем терминал в веб-проекте, вводим следующие команды

```

Администратор@Techsite4 MINGW64 /c/Program Files (x86)/Kaskad/Sambar/docs/kaskad
$ git init
Initialized empty Git repository in C:/Program Files (x86)/Kaskad/Sambar/docs/kaskad/.git/

Администратор@Techsite4 MINGW64 /c/Program Files (x86)/Kaskad/Sambar/docs/kaskad (master)
$ git add .

Администратор@Techsite4 MINGW64 /c/Program Files (x86)/Kaskad/Sambar/docs/kaskad (master)
$ git commit -m "add first"
Author identity unknown

*** Please tell me who you are.

Run

    git config --global user.email "you@example.com"
    git config --global user.name "Your Name"

to set your account's default identity.
Omit --global to set the identity only in this repository.

fatal: unable to auto-detect email address (got 'Администратор@Techsite4.(none)')

Администратор@Techsite4 MINGW64 /c/Program Files (x86)/Kaskad/Sambar/docs/kaskad (master)
$ █

```

Далее он предлагает залогиниться в гитхабе, вводим команды которые он предлагает с нашими данными

```

Администратор@Techsite4 MINGW64 /c/Program Files (x86)/Kaskad/Sambar/docs/kaskad (master)
$ git config --global user.email "saim.asutp@gmail.com"

Администратор@Techsite4 MINGW64 /c/Program Files (x86)/Kaskad/Sambar/docs/kaskad (master)
$ git config --global user.name "kaskad-saim"

```

Снова пробуем закоммитить и в этот раз он делает это успешно

```

Администратор@Techsite4 MINGW64 /c/Program Files (x86)/Kaskad/Sambar/docs/kaskad (master)
$ git add .

Администратор@Techsite4 MINGW64 /c/Program Files (x86)/Kaskad/Sambar/docs/kaskad (master)
$ git commit -m "add first"
[master (root-commit) 33dfae0] add first
57 files changed, 16092 insertions(+)

```

5. Нам нужно настроить командную строку гит работу через прокси, т.к. у нас интернет через прокси

```
git config --global http.proxy http://proxyuser:proxypwd@proxy.server.com:8080
```

6. Вводим следующие команды для связывания репозитория с локальным репозиторием

```
Администратор@Techsite4 MINGW64 /c/Program Files (x86)/Kaskad/Sambar/docs/kaskad (master)
$ git remote add origin https://github.com/kaskad-saim/carbon-server

Администратор@Techsite4 MINGW64 /c/Program Files (x86)/Kaskad/Sambar/docs/kaskad (master)
$ git push origin main
error: src refspec main does not match any
error: failed to push some refs to 'https://github.com/kaskad-saim/carbon-server'
```

Нам нужно использовать ветку main, как в самом гитхабе

```
Администратор@Techsite4 MINGW64 /c/Program Files (x86)/Kaskad/Sambar/docs/kaskad (master)
$ git branch -M main
```

7. Пробуем запушить в репозиторий. Получаем следующую ошибку

```
Администратор@Techsite4 MINGW64 /c/Program Files (x86)/Kaskad/Sambar/docs/kaskad (main)
$ git push origin main
info: please complete authentication in your browser...
To https://github.com/kaskad-saim/carbon-server
 ! [rejected]          main -> main (fetch first)
error: failed to push some refs to 'https://github.com/kaskad-saim/carbon-server'
hint: Updates were rejected because the remote contains work that you do
hint: not have locally. This is usually caused by another repository pushing
hint: to the same ref. You may want to first integrate the remote changes
hint: (e.g., 'git pull ...') before pushing again.
hint: See the 'Note about fast-forwards' in 'git push --help' for details.
```

8. Делаем что он просит, но все равно ошибка

```
Администратор@Techsite4 MINGW64 /c/Program Files (x86)/Kaskad/Sambar/docs/kaskad (main)
$ git pull origin main
From https://github.com/kaskad-saim/carbon-server
 * branch          main      -> FETCH_HEAD
fatal: refusing to merge unrelated histories

Администратор@Techsite4 MINGW64 /c/Program Files (x86)/Kaskad/Sambar/docs/kaskad (main)
$ git push
fatal: The current branch main has no upstream branch.
To push the current branch and set the remote as upstream, use

    git push --set-upstream origin main

To have this happen automatically for branches without a tracking
upstream, see 'push.autoSetupRemote' in 'git help config'.

Администратор@Techsite4 MINGW64 /c/Program Files (x86)/Kaskad/Sambar/docs/kaskad (main)
$ git push --set-upstream origin main
To https://github.com/kaskad-saim/carbon-server
 ! [rejected]          main -> main (non-fast-forward)
error: failed to push some refs to 'https://github.com/kaskad-saim/carbon-server'
hint: Updates were rejected because the tip of your current branch is behind
hint: its remote counterpart. Integrate the remote changes (e.g.
hint: 'git pull ...') before pushing again.
hint: See the 'Note about fast-forwards' in 'git push --help' for details.
```

9. Вводим команду со следующим флагом

```
Администратор@Techsite4 MINGW64 /c/Program Files (x86)/Kaskad/Sambar/docs/kaskad (main)
$ git pull origin main --allow-unrelated-histories
From https://github.com/kaskad-saim/carbon-server
* branch          main          -> FETCH_HEAD
Merge made by the 'ort' strategy.
 README.md | 2 ++
1 file changed, 2 insertions(+)
create mode 100644 README.md

Администратор@Techsite4 MINGW64 /c/Program Files (x86)/Kaskad/Sambar/docs/kaskad (main)
$ git push
fatal: The current branch main has no upstream branch.
To push the current branch and set the remote as upstream, use

    git push --set-upstream origin main

To have this happen automatically for branches without a tracking
upstream, see 'push.autoSetupRemote' in 'git help config'.

Администратор@Techsite4 MINGW64 /c/Program Files (x86)/Kaskad/Sambar/docs/kaskad (main)
$ git push --set-upstream origin main

```

Проверяем – видим что проект успешно залит

The screenshot shows the GitHub interface for the 'carbon-server' repository. At the top, the repository name 'carbon-server' is displayed with a 'Public' badge. To the right are buttons for 'Pin' and 'Unwatch' with a count of '1'. Below this, the branch 'main' is selected, showing '1 Branch' and '0 Tags'. A search bar 'Go to file' and buttons 'Add file' and 'Code' are present. The main content area shows a merge commit by 'kaskad-saim' from the 'main' branch of the repository 'https://github.com/kaskad-saim/carbon-server'. The commit message is 'Merge branch 'main' of https://github.com/kaskad-saim/carbon-server', the commit hash is '10358d4', and it was made '2 minutes ago' with '3 Commits'. Below the commit information is a list of files and folders added in this commit:

File/Folder	Commit Message	Time Ago
css	add first	18 minutes ago
images	add first	18 minutes ago
js	add first	18 minutes ago
pic	add first	18 minutes ago
production/carbon	add first	18 minutes ago
.gitignore	add first	18 minutes ago
README.md	Initial commit	36 minutes ago
WEB_CLNT.log	add first	18 minutes ago
Web_Clnt.dll	add first	18 minutes ago
Web_Clnt.ini	add first	18 minutes ago

При правках новый и редактируемый код подсвечивается

The screenshot shows a code editor with a dark background. The code is HTML, and the new or modified lines are highlighted in green. The code is as follows:

```
147
148 <body>
149   <div class="current-param">
150     <h1 class="current-param_title">
151       <span class="current-param_title-span">Карбон</span>
152       Горелки
153     </h1>
154     <div class="current-param_box">
155       <span class="current-param_date">
156         <#Date>
157       </span>
158       <span class="current-param_time">
159         <#Time>
160       </span>
161     </div>
162   </div>

```

Если мы хотим залить изменения на гитхаб то вводим следующие команды:

1. git status – статус изменений в проекте
2. git add . – добавляем все изменения
3. git commit -m "add corrections" – создаем коммит
4. git push origin main - пушим изменения

на гитхабе можем посмотреть в ветке – коммиты новые изменения
